Data Protection Appliance: Backup to Disk with Deduplication

ETERNUS CS Data Protection Appliances

Data protection appliances from Fujitsu simplify and consolidate backup and archive infrastructures. Fujitsu specializes in mapping the right technology for individual needs depending on your business size. Our appliances offer advanced capabilities such as deduplication and replication, thus mitigating risk and minimizing downtime.

ETERNUS CS800 S7

FUJITSU Storage ETERNUS CS800 is a turnkey, easy to operate data protection appliance providing leading data deduplication technology which reduces required disk capacity by up to 95%. By combining deduplication with replication it enables backup and restore across IT sites with low network bandwidth requirements and allows collecting remote backups to a central site. By supporting all major backup suites it is a perfect consolidation platform for data copies. Deep integration capabilities for VEEAM and Veritas OST functions enable a tight integration into backup processes including additional copies on tape whilst reducing the investment in additional hardware. Easy scalability results in investment protection for environments with high data growth.
